## 2022 Bulls from Cornell Farms

Welcome to our 2022 Bull Sale pamphlet. We have been raising breeding stock since 1963 and believe that good management is breeding and selecting cattle that do well on feed sources grown economically here. Profitability is more about how much you save rather than what you make.

Since we have a strong, valued-added market for our cull cows, we have tight culling practices - temperament, udders, conception rates, feet and poor production are all part of our decisions when culling an animal. This selection criteria provides an ideal mother for the bulls we have for sale and has allowed us to develop a cow herd that is deep, thick and has the capacity to use forages efficiently. We are convinced that our moderate cows wear more pounds per acre and that type of cow should make us all more profitable.

Come early for the best selection. For pictures and videos of some of the bulls go to our website. We look forward to hearing from you so we can help you with your bull selection. Thanks for your support over the years. We enjoy sharing in the excitement of Agriculture with all of you!

**The Cornell Family**

### Two Year Old Bulls for Sale

Bull Breed	Birthdate Sire	Dam Dam-Sire	CE BW (lb)	AWW (lbs) WW	AYW YW	MILK TM	Weight (Mar 15/22)

### Definition of Terms

**CE:** Calving Ease

**BW:** Birth Weight

**AWW:** Adjusted Weaning Weight

**ADG:** Average Daily Gain

**SC:** Scrotal Circumference

**AYW:** Adjusted Yearling Weight

**FS:** A score determined by a mathematical calculation involving age and hip height—an indication of what the mature size of the animal will be.

**BW EPD:** Measures how much above and below the breed averages an offspring will gain due to the parent.

**CE EPD:** Predicts the ease with which the progeny of the animal should be born.

**WW EPD:** Reflects progeny growth difference up to 205 days. **YW EPD:** Reflects progeny growth from weaning age to yearling age,

**TM EPD:** Combines the genetics for pre-weaning growth and the influence of milk on the weaning weight of the daughter's progeny.

**MILK EPD:** Indicates the ability of a sire's daughters to provide their calves with an environment which encourages growth from birth to weaning through milk production and mothering ability.
