

2026 Bulls from Cornell Farms

We are all wondering how long these great cattle prices will last and when will heifer retention begin? Now is the time to disperse those unproductive cows at good value. Replace them with genetics that can forage on their own and wean a profitable calf every year. Retaining daughters out of our bulls will set you up for success in the coming years and provide you with profitable cows. We will never sell a bull that we wouldn't use ourselves. This year's group has many options for either heifers or cows; calving ease or performance. Swing by anytime to take a look. Free delivery available within the Rainy River District.

Definition of Terms

CE: Calving Ease

BW: Birth Weight

AWW: Adjusted Weaning Weight

ADG: Average Daily Gain

SC: Scrotal Circumference

AYW: Adjusted Yearling Weight

FS: A score determined by a mathematical calculation involving age and hip height—an indication of what the mature size of the animal will be.

BW EPD: Measures how much above and below the breed averages an offspring will gain due to the parent.

CE EPD: Predicts the ease with which the progeny of the animal should be born.

WW EPD: Reflects progeny growth difference up to 205 days. **YW EPD:** Reflects progeny growth from weaning age to yearling age,

TM EPD: Combines the genetics for pre-weaning growth and the influence of milk on the weaning weight of the daughter' progeny.

MILK EPD: Indicates the ability of a sire's daughters to provide their calves with an environment which encourages growth from birth to weaning through milk production and mothering ability.
